How to Write an Effective Technical Paper

Saifur Rahman, PhD

President, IEEE Power & Energy Society 2018 & 2019 Professor, ECE Department, Virginia Tech, USA

Invited Talk, IEEE PES Student Chapter Georgia Tech, 28 January 2021

Webinar Speaker,

Saifur Rahman, Ph.D. Professor and Director Virginia Tech Advanced Research Institute

Education

Ph.D., Electrical Engineering, Virginia Polytechnic Institute and State University, 1978. M.S., Electrical Sciences, State University of New York at Stony Brook, 1975. B.Sc., Electrical Engineering, Bangladesh University of Engineering and Technology, Dhaka, 1972

Professional Society Activities

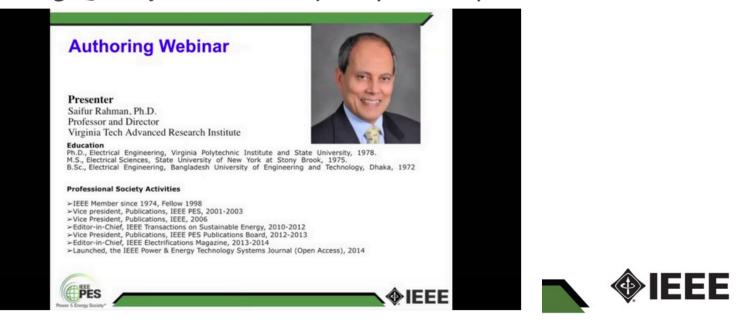

>IEEE Member since 1975, Fellow 1998, Life Fellow 2014
>President, IEEE PES, 2018-2019
>Vice president, Publications, IEEE PES, 2001-2003, 2012-2013
>Vice President, Publications, IEEE, 2006
>Editor-in-Chief, IEEE Transactions on Sustainable Energy, 2010-2012
>Editor-in-Chief, IEEE Electrifications Magazine, 2013-2014
>Launched, the IEEE Power & Energy Technology Systems Journal (Open Access), 2014

Writing Quality Technical Papers (Webinar)

Audience

Audience Basic Questions

1.Are you writing this paper for the sake of writing a paper?

2.Or do you want to show how others can benefit from your work?

Audience Scientific research publishing

- Who writes scientific papers?
 - Engineers, scientists, educators and researchers from:
 - Corporations
 - Academia
 - Government
 - Students typically write and present conference papers before submitting journal articles

Audience What IEEE editors and reviewers are looking for

- Content that is appropriate, in scope and level
- Clearly written original material that addresses a new and important problem
- Extension of previously published work
- Valid methods and rationale
- Illustrations, tables and graphs that support the text
- References that are current and relevant to the subject

Audience How does the review process work?

- Editor-in-Chief gets the paper after it goes through content match check (iAuthenticate) and "banned author" check
- If the paper is in scope for the journal, it is assigned to an editor (associate editor)
- Editor assigns the paper to five or more reviewers
- Reviewers send their comments back to the editor
- Editor makes a recommendation to the EIC as follows:
 - o Accept
 - Revise & Resubmit
 - o Reject
- The EIC makes the final decision and informs the corresponding author

Audience Why IEEE editors and reviewers reject papers

- The content is not a good fit for the publication
- There are serious scientific flaws:
 - Inconclusive results or incorrect interpretation
 - Fraudulent research
- It is poorly written
- It does not address a big enough problem or advance the scientific field
- Most of the work was previously published
- The quality is not good enough for the journal
- Reviewers have misunderstood the article

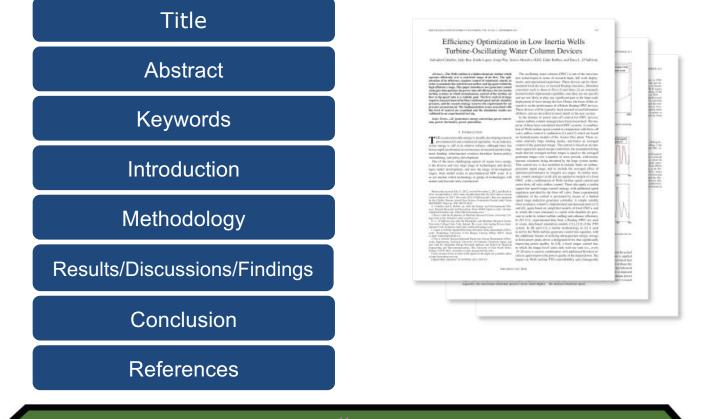

Paper Structure Elements of a manuscript

Paper Structure Title

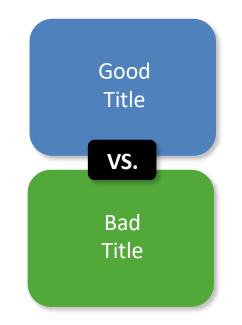

An effective title should...

•Answer the reader's question: *"Is this article relevant to me?"*

Grab the reader's attention

•Describe the content of a paper using the fewest possible words

- Is crisp, concise
- Uses keywords
- Avoids jargon

Paper Structure

Title Dos and Don'ts

A Human Expert-based Approach to Electrical Peak Demand Management

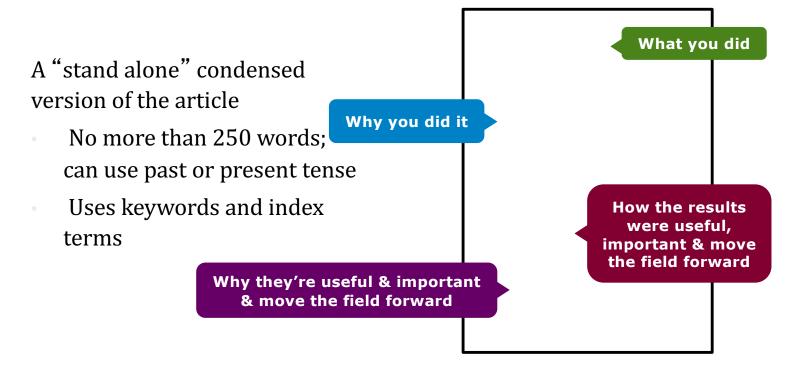

VS

A <mark>better</mark> approach of managing <mark>environmental and energy sustainability via a study of different and the solution of electric load forecasting and solution of the solution o</mark>

Paper Structure Abstract

Paper Structure

Abstract Dos and Don'ts

The objective of this paper was to propose a human expert-based approach to electrical peak demand management. The proposed approach helped to allocate demand curtailments (MW) among distribution substations (DS) or feeders in an electric utility service area based on requirements of the central load dispatch center. Demand curtailment allocation was quantified taking into account demand response (DR) potential and load curtailment priority of each DS, which can be determined using DS loading level, capacity of each DS, customer types (residential/commercial) and load categories (deployable, interruptible or critical). Analytic Hierarchy Process (AHP) was used to model a complex decision-making process according to both expert inputs and objective parameters. Simulation case studies were conducted to demonstrate how the proposed approach can be implemented to perform DR using real-world data from an electric utility. Simulation results demonstrated that the proposed approach is capable of achieving realistic demand curtailment allocations among different DSs to meet the peak load reduction requirements at the utility level.

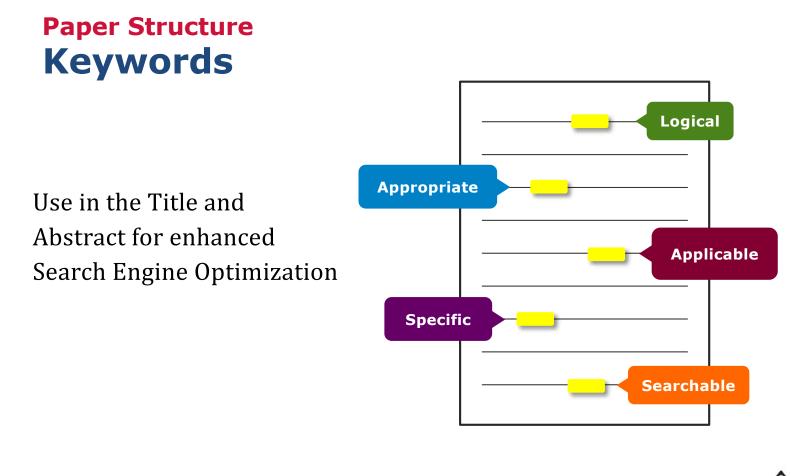

Vs

This paper presents and assesses a framework for an engineering capstone design program. We explain how student preparation, project selection, and instructor mentorship are the three key elements that must be addressed before the capstone experience is ready for the students. Next, we describe a way to administer and execute the capstone design experience including design workshops and lead engineers. We describe the importance in assessing the capstone design experience and report recent assessment results of our framework. We comment specifically on what students thought were the most important aspects of their experience in engineering capstone design and provide quantitative insight into what parts of the framework are most important.

First person, present tense No actual results, only describes the organization of the paper

Paper Structure Introduction

- A description of the problem you researched
- It should move step by step through:

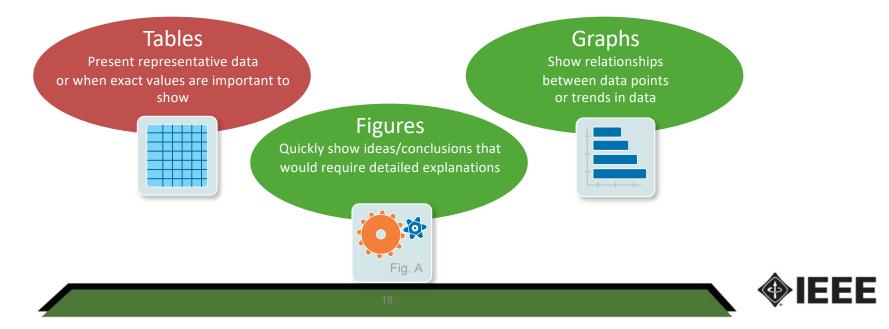

- The introduction should be:
 - Specific, not too broad or vague
 - About 1-2 pages
 - Written in the present tense

Paper Structure Methodology

- Problem formulation and the processes used to solve the problem, prove or disprove the hypothesis
- Use illustrations to clarify ideas and support conclusions:

Paper Structure Results/discussion

Demonstrate that you solved the problem or made significant advances

Results: Summarizes the Data

- Should be clear and concise
- Use figures or tables with narrative to illustrate findings

Discussion: Interprets the Results

- Why your research offers a new solution
- How can it benefit other researchers professionals

IMENEZ-MUNDI & A: LET RETRIEVAL METHODO FROM LANDSAT-6 THERMAL INFRARED SEMOOR DATA

the SC algorithm over the whole range of ω values increase to 3-4 K, except for the TIGR_trip database, with an RMSE of 2 K. This last result is explained by the ω distribution, which is biased toward low values of ω in this database. a only atmospheric profiles with w values lower that am^{-2} are selected, the SC algorithm provides RM34 and 1.5 K, with almost equal values of bias and standard on, around 1 K in both cases (with a negative bias, thus mates the LST). In contrast, when only ω 1.3 χ - cm⁻² are considered, the SC algorithm ther than 3 x - am ex RMSEx higher than 5 K. In these cases, it is preferable solute the atmospheric functions of the SC algorithm dim. (3) rather than approximating them by a polynomial och as siven by [4].

V. DISCUSSION AND CONCLUSION

The two Londsot-S TIR bands allow the intercompo of two LST retrieval methods based on different phy such as the SC (only one TIR band required) ns (two TIR bands required). Direct inversion transfer equation, which can be considered im, is assumed to be a "ground-truth" indition that the information about the Discussion and L_d is accurate enough. The SC algo-

ation this latter is a continuation of the previous SC veloped for Landant-4 and Landant-5 TM sensors, ine EIM+ sensor on board the Landant-7 platform (9), and it could be used to generate consistent LST products from the historical Landant data using a single algorithm. An advantage of the SC algorithm is that, opart from surface emisnly water vapor content is required as input. However, acted that errors on LST become unacceptable for high where vapor contents (e.g., $> 3 \text{ g} \cdot \text{cm}^{-3}$). This problem can be orily solved by computing the atmospheric functions directly com τ , L_{u} , and L_{L} values [see (5)], or also by including ture as input [15]. A main advantage of the SW 1 that it performs well over global conditions and, is, a wide range of water vapor values; and that it only res water vapor as input (apart from surface emissivity s two TIR bands). However, the SW algorithm can be applied to the new Landant-S TIRS data, since previous

TM/ETM sectors only had one TIR band. The LST algorithms presented in this latter wave tested with simulated data sets obtained for a variety of global atmospheric conditions and surface eminivities. The easily showed RMSE alues of typically less than 1.5 K, although for the SC almoy is only achieved for w values below firm teeting also showed that the SW errors lower than the SC errors for increasing water vapor, and e versa, az demonstrated in the simulation study presented Sobrino and Jiménez-Muñoz [18]. Although an estensive ion exercise from is sits measurements is required to mens the performance of the two LST algorithms, the results binned for the simulated data, the sensitivity analysis, as well as the previous findings for algorithms with the same mothe-motical structure give confidence in the algorithm accuracies estimated here.

Paper Structure Conclusion

- Explain what the research has achieved
 - As it relates to the problem stated in the Introduction
 - Revisit the key points in each section
 - Include a summary of the main findings and implications for the field
- Provide benefits and shortcomings of:
 - The solution presented
 - Your research and methodology
- Suggest future areas for research

Paper Structure References

- Support and validate the hypothesis your research proves, disproves or resolves
- There is no limit to the number of references
 - But use only those that directly support your work (about 30)
- Ensure proper author attribution
 - Author name, article title, publication name, publisher, year published, volume and page number, Digital Object Identifier (DOI)

Who should be on the Authors' list

A Report

A report documents in detail the work done including results for a project and has a lead author and other multiple authors

A Technical Paper

- It highlights one or more aspects of a report
- Multiple papers can come out of one report
- Include any and all who have contributed to the <u>writing of the paper</u>
- Others can be acknowledged

Ethics Types of misconduct

Conflict of Interest

A financial or other relationship with the publication at odds with the unbiased presentation of data or analysis.

Plagiarism

Copying another person's work word for word or paraphrasing without proper citation.

Missing Author Attribution

Must be given if you use another author's ideas in your article, even if you do not directly quote a source.

Ethics Ethical publishing

Plagiarism

- Avoid plagiarism
 - Cite and separate any verbatim copied material – but how much?
 - Paraphrase other's text properly, and include citation
 - Credit any ideas from other sources
 - Familiarize yourself with IEEE Policies

Refer to our Tips Sheet http://www.ieee.org/publica tions_standards/publications /authors/plagiarism_and_m ultiple_submissions.pdf

Ethics Ethical publishing

Duplication, Redundancies & Multiple Submissions

- Author must submit original work that:
 - Has not appeared elsewhere for publication
 - Is not under review for another refereed publication
 - Cites previous work
 - Indicates how it differs from the previously published work
 - Authors MUST also **inform the editor** when submitting any previously published work

Refer to our Tips Sheet http://www.ieee.org/public ations_standards/publicati ons/authors/plagiarism_an d_multiple_submissions.pd f

Where to Publish?

Traditional Journals -

Articles available through subscription Open Access Journals –

Author pays, free download Hybrid Journals –

Most articles are traditional, some are open

access (author preference)

Open Access Publications

Next Steps

Open Access Opportunity for IEEE Authors (Author pays model)

IEEE provides 3 open access publishing options to meet the varying needs of authors:

- New multidisciplinary journal, IEEE Access
- 100+ Hybrid journals
- Fully open access topical journals

http://open.ieee.org/

PES Full Open Access Option #1

IEEE Open Access Journal of Power and Energy

- Will start publishing articles from January 2020
- Existing <u>OA Journal of Power and Energy Technology Systems</u> will be rebranded with this <u>new name</u>, scope covering the entire field of PES for both practice-oriented and academic articles
- Article processing charge subsidised at US\$1350
- Between 10-15 articles each year will receive further subsidy depending on authors' affordability/circumstances

PES Full Open Access Option #2

A dedicated section on Power & Energy for publishing papers in the PES field in IEEE Access

- The section will start from January 2020, submissions started in September 2019
- Paper will be handled by 3 PES-appointed Editors
- APC: US\$1750

Impact Factor

Are we depending too heavily on Impact Factors?

Impact Factor from Journal Citation Reports

THOMSON REUTERS

Products & Services About Us C

Journal Citation Reports

The recognized authority for evaluating journals

Description:

Journal Citation Reports® offers a systematic, objective means to critically evaluate the world's leading journals, with quantifiable, statistical information based on citation data. By compiling articles' cited references, JCR helps to measure research influence and impact at the journal and category levels, and shows the relationship between citing and cited journals. Available in Science and Social Sciences editions.
