Smart Grid helps with Greater Integration of Renewables into the Power Grid
What is a Smart Grid

"Smart grid" is a concept with many elements where monitoring and control of each element in the chain of generation, transmission, distribution and end-use allow the electricity delivery and use to be more efficient.
Electric Power Grid

How Does the Electrical Grid Work?

- Power Sources
- Transformers
- Transmission lines
- Distribution centers

https://blog.arcadia.com/understanding-the-electrical-grid/
Motivation for a Smart Grid

Motivation for a Smart Grid on the basis of the energy management triangle - political objectives and technical implementation.

Desire to make the grid smarter, safer, reliable and more cost-effective using advanced sensors, communication technologies and distributed computing.
Difference Between a Normal Grid and a Smart Grid

Normal Phone

Starting and End Points of a Smart Grid

- Power Plant
- Transmission
- Distribution
- Home Business
- End-use Appliances
Smart Grid Building Blocks
Evolution of the Grid

Smart Grid

**Before** Smart Grid:

*One-way power flow, simple interactions*

---

**After** Smart Grid:

*Two-way power flow, multi-stakeholder interactions*

---

Evolution of the Grid

Merging Power Flow with Information Flow:

Integrated Communications
Electric Power & Communication Infrastructures

1. Power Infrastructure

- Central Generating Station
- Step-Up Transformer
- Distribution Substation
- Receiving Station
- Distribution Substation

2. Information Infrastructure

- Control Center
- Distribution Substation
- Gas Turbine
- Recip Engine
- Distribution Substation
- Cogeneration
- Solar Photovoltaics
- Batteries
- Residential Data Concentrator

Changing Landscape for the Electric Utility
Issues with Distributed Generation

- Wind and solar are intermittent
- Hydro is space limited
- Resource is free but not always usable
BPA Wind Output and Load Mismatch (A typical day in January)
BPA Wind Output and Load Mismatch
(A typical day in April)
BPA Wind Output and Load Mismatch
(A typical day in July)
BPA Wind Output and Load Mismatch
(A typical day in October)
Wind output can drop 43.7 MW in 1 minute for a single 150-MW wind farm.

Source: NREL
Wind output can drop 113 MW in 10 minutes, and increase 106 MW in 10 minutes.

Source: NREL
Roof-top Solar Photovoltaics in Virginia

Intermittency Caused by Weather Events

Solar PV Project in UAE

Sand Storm in Abu Dhabi
In-depth look at Solar PV in Saudi Arabia

2-MW Roof-top Solar PV plant at KAUST
Solar PV Panels in Saudi Arabia

Reality Check
Solar PV Array (100kWp) Riyadh Area
7-Day Solar PV Output (Virginia)
7-Day Solar PV Output (Virginia cloudy)
Daily PV Output (Virginia)
Daily PV Output (Virginia, intermittent)
Can the Intermittency be Absorbed by the Network?
Historically: Demand driven supply (supply responds to demand)

New Reality: Supply driven demand (demand needs to adjust to meet fluctuating supply with help from storage)

New Paradigm for the Electric Power System

THE SMART GRID ECOSYSTEM
The Smart Grid Ecosystem

**Smart grid:** Bi-directional flows of energy, remote control/automation of power, integrated distributed energy…

**Smart city:** Complex system of interconnected infrastructures and services…

**Smart Campus:** A collection of buildings managed by the same facility manager…

**Smart buildings:** Intelligent building automation systems, smart devices, productive users, grid integration…

Supported by ICT and distributed networks of intelligent sensors, data centers/clouds.
SMART GRID TECHNOLOGIES FOR THE FUTURE

- Energy Management Systems
- Advanced Metering Infrastructure
- IoT Projects
- Demand Response
- Electric Vehicles
- Big Data

https://www.valuer.ai/blog/innovative-smart-grid-technologies-for-the-future
USING AN ELECTRIC VEHICLE TO STORE ENERGY

1. The electric vehicle is connected to the smart grid via a charging station.

2. The grid programme “knows” that the vehicle is not being used in the evening. It records the vehicle as a potential source of stored electricity.

THE AGILITY EFFECT

Big Data Challenges in Future Smart Grid
