Keynote Speech

Prof. Saifur Rahman
2022 IEEE President-elect
Director, Virginia Tech Advanced Research Inst., USA

Role of Smart Grid in Facilitating the Integration of Renewables into the Power Grid

ASEAN Electrotechnical Symposium & Exhibition
Kuala Lumpur, Malaysia, 17 March 2022
Outline

01 What is a Smart Grid?
02 Motivation for a Smart Grid
03 Difference Between a Normal / Smart Grid
04 Smart Grid Building Blocks
05 Evolution of the Grid
06 Merging Power Flow with Information Flow
07 Changing Landscape for the Electric Utility
08 Wind / Solar Energy
09 The Smart Grid Ecosystem
10 Intelligent Interconnected Microgrids
What is a Smart Grid

"Smart grid" is a concept with many elements where monitoring and control of each element in the chain of generation, transmission, distribution and end-use allow the electricity delivery and use to be more efficient.
Electric Power Grid

How Does the Electrical Grid Work?

• Power Sources
• Transformers
• Transmission lines
• Distribution centers

https://blog.arcadia.com/understanding-the-electrical-grid/
Motivation for a Smart Grid

Motivation for a Smart Grid on the basis of the energy management triangle - political objectives and technical implementation.

Desire to make the grid smarter, safer, reliable and more cost-effective using advanced sensors, communication technologies and distributed computing.
Difference Between a Normal Grid And a Smart Grid

Normal Phone

Smart Phone

https://en.wikipedia.org/wiki/Smart_grid
Starting and End Points of a Smart Grid

- Power Plant
- Transmission
- Distribution
- Home Business
- End-use Appliances
Smart Grid Building Blocks
Evolution of the Grid

Smart Grid

**Before Smart Grid:**
One-way power flow, simple interactions

**After Smart Grid:**
Two-way power flow, multi-stakeholder interactions

Merging Power Flow with Information Flow:

Integrated Communications
Electric Power & Communication Infrastructures

1. Power Infrastructure

- Central Generating Station
- Step-Up Transformer
- Distribution Substation
- Receiving Station
- Distribution Substation
- Commercial
- Industrial
- Residential
- Micro-turbine
- Photo Voltaics
- Batteries
- Residential Data Concentrator
- Gas Turbine
- Recip Engine
- Fuel Cell
- Cogeneration
- Flywheel
- Data network Users

2. Information Infrastructure

Source: EPRI
Intelligent Interconnected Microgrids

Intelligent Load
Demand or price-driven control of appliances

Distribution Network
Interconnected micro grids

Distributed Arch.

Local Monitoring and Control

Sensors
Detect outages, fluctuations, disturbances

Microgrid

Bulk Power Plant

Wind Power Park

Smart Inverters and Storage
Minimize voltage and power fluctuations

Control Room Functions
Balance electricity Supply/demand across the grid

Changing Landscape for the Electric Utility
Issues with Distributed Generation

- Wind and solar are intermittent
- Hydro is space limited
- Resource is free but not always usable
BPA Wind Output and Load Mismatch (A typical day in January)
BPA Wind Output and Load Mismatch
(A typical day in April)
BPA Wind Output and Load Mismatch
(A typical day in July)
BPA Wind Output and Load Mismatch
(A typical day in October)
Wind output can drop 43.7 MW in 1 minute for a single 150-MW wind farm.

Source: NREL
10-min Variation of a 150MW Wind Farm Output in Texas

Wind output can drop 113 MW in 10 minutes, and increase 106 MW in 10 minutes

Source: NREL
Solar Energy
Roof-top Solar Photovoltaics in Virginia
Intermittency Caused by Weather Events

Solar PV Project in UAE

Sand Storm in Abu Dhabi
In-depth look at Solar PV in Saudi Arabia

2-MW Roof-top Solar PV plant at KAUST
Solar PV Panels in Saudi Arabia

Reality Check
Solar PV Array (100kWp) Riyadh Area
7-Day Solar PV Output (Virginia)
7-Day Solar PV Output (Virginia cloudy)
Daily PV Output (Virginia)
Daily PV Output (Virginia, intermittent)
Can the Intermittency be Absorbed by the Network?
Historically: Demand driven supply (supply responds to demand)

New Reality: Supply driven demand (demand needs to adjust to meet fluctuating supply with help from storage)

THE SMART GRID ECOSYSTEM

New Paradigm for the Electric Power System
The Smart Grid Ecosystem

**Smart grid**: Bi-directional flows of energy, remote control/automation of power, integrated distributed energy…

**Smart city**: Complex system of interconnected infrastructures and services…

**Smart Campus**: A collection of buildings managed by the same facility manager…

**Smart buildings**: Intelligent building automation systems, smart devices, productive users, grid integration…

Supported by ICT and distributed networks of intelligent sensors, data centers/clouds
SMART GRID TECHNOLOGIES FOR THE FUTURE

- Energy Management Systems
- Advanced Metering Infrastructure
- IoT Projects
- Demand Response
- Electric Vehicles
- Big Data

https://www.valuer.ai/blog/innovative-smart-grid-technologies-for-the-future
USING AN ELECTRIC VEHICLE TO STORE ENERGY

1. The electric vehicle is connected to the smart grid via a charging station.

2. The grid programme “knows” that the vehicle is not being used in the evening. It records the vehicle as a potential source of stored electricity.

THE AGILITY EFFECT

Big Data Challenges in Future Smart Grid
