Role of Smart Grid in Facilitating the Integration of Renewables

Invited Talk

National University of Singapore, 02 March 2023

Virginia Tech

ARI

Let us make IEEE a more successful and resilient global technical organization

With support from a broad spectrum of IEEE members, I have been elected as the 2022 IEEE President-Elect. I am looking forward to working with IEEE members in all 10 regions of the world. I will begin serving as IEEE President on 1 January 2023.

Saifur Rahman

Joseph R. Loring Professor of Electrical and Computer Engineering Virginia Tech

Arlington, Virginia, USA

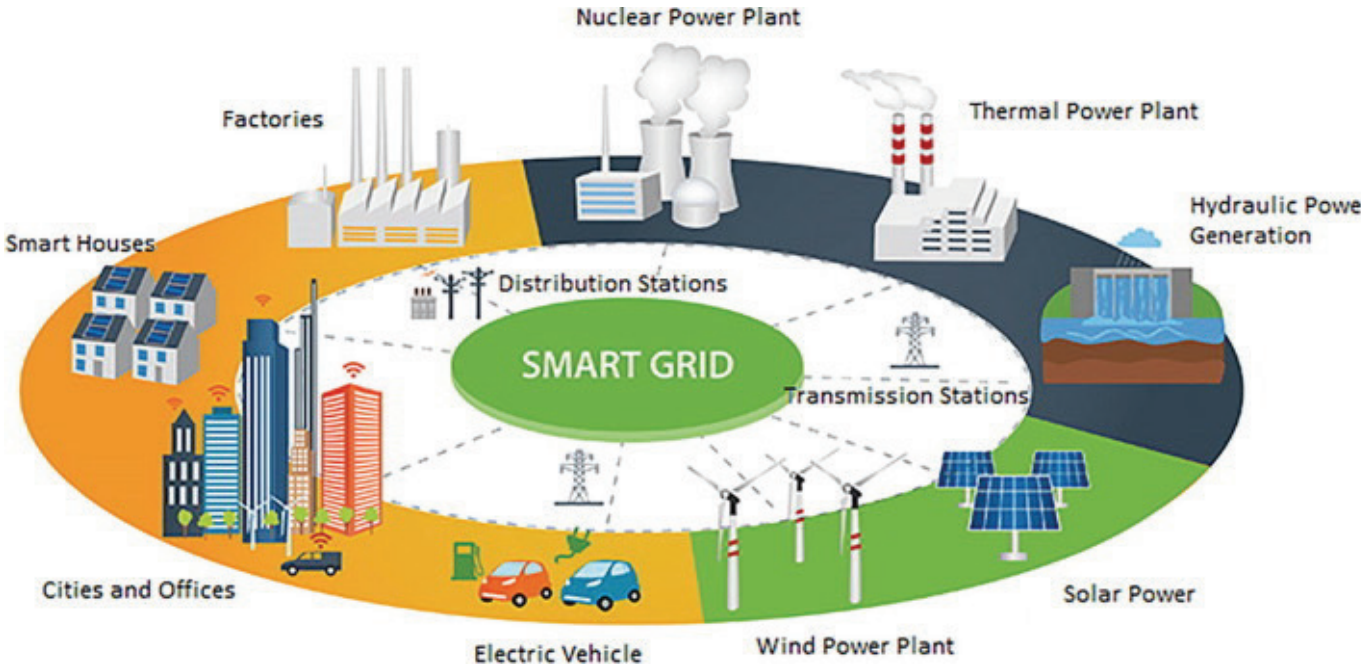
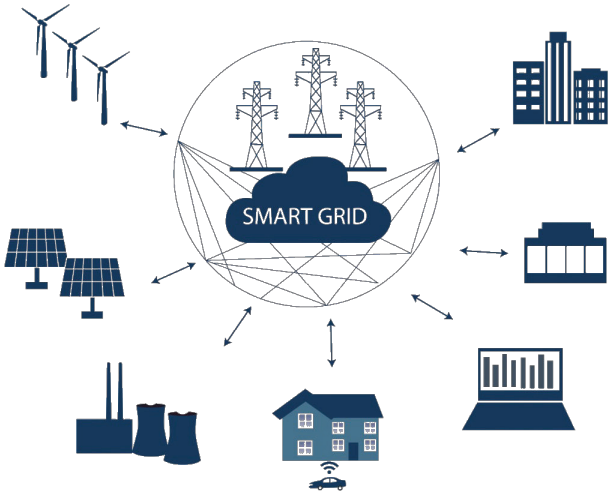
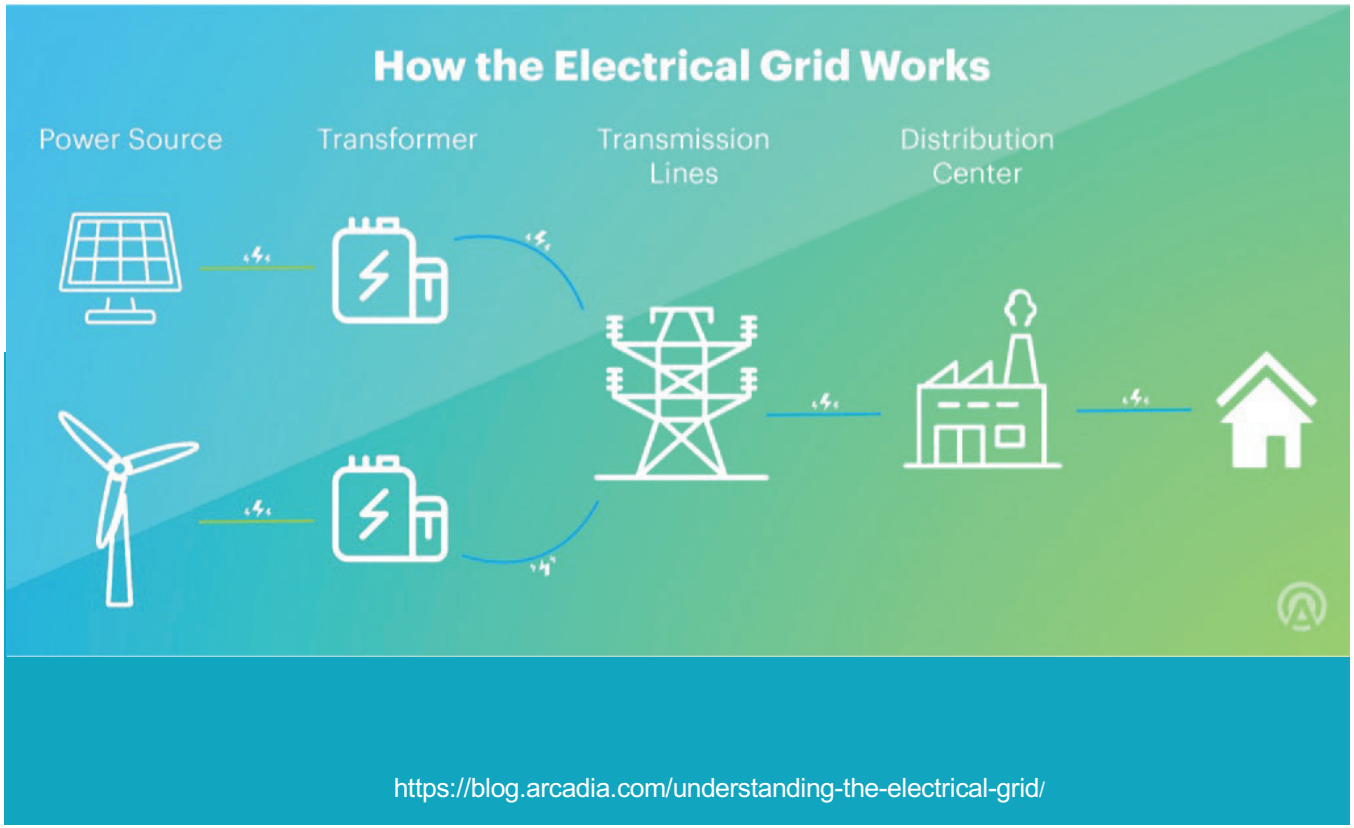
What is a Smart Grid





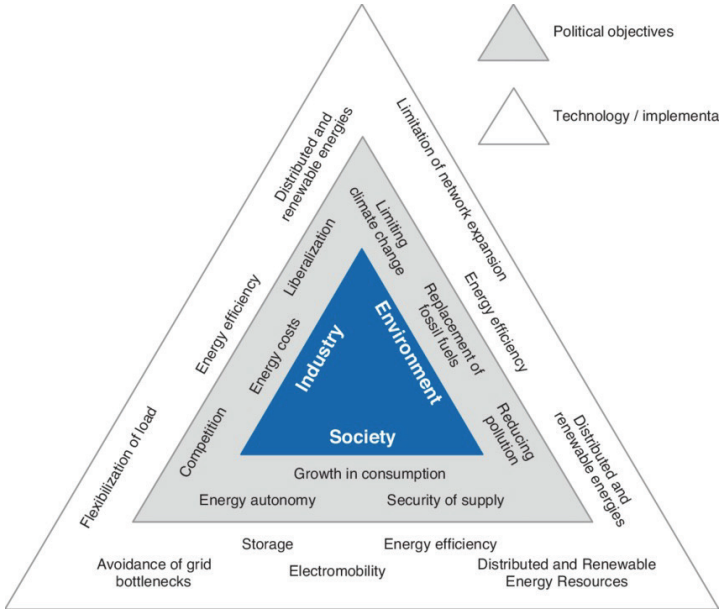
"Smart grid" is a concept with many elements where monitoring and control of each element in the chain of generation, transmission, distribution and end-use allow the electricity delivery and use to be more efficient.

Electric Power Grid

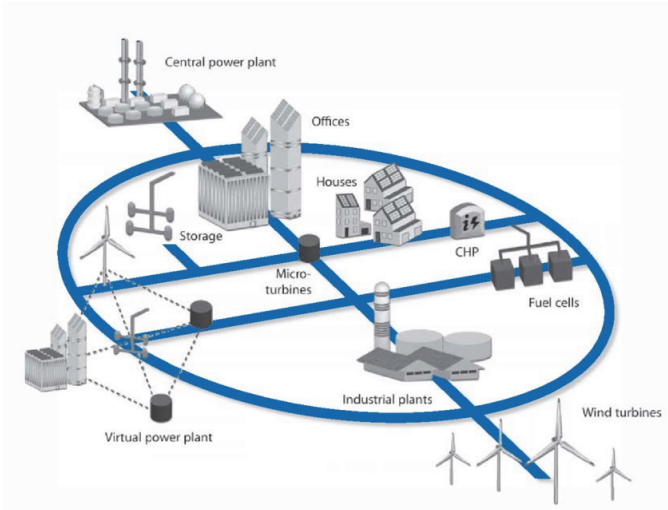


Motivation for a Smart Grid

Motivation for a Smart Grid on the basis of the energy management triangle - political objectives and technical implementation.



https://www.researchgate.net/figure/Motivation-for-a-Smart-Grid-on-the-basis-of-the-energy-management-triangle-political_fig1_263264024

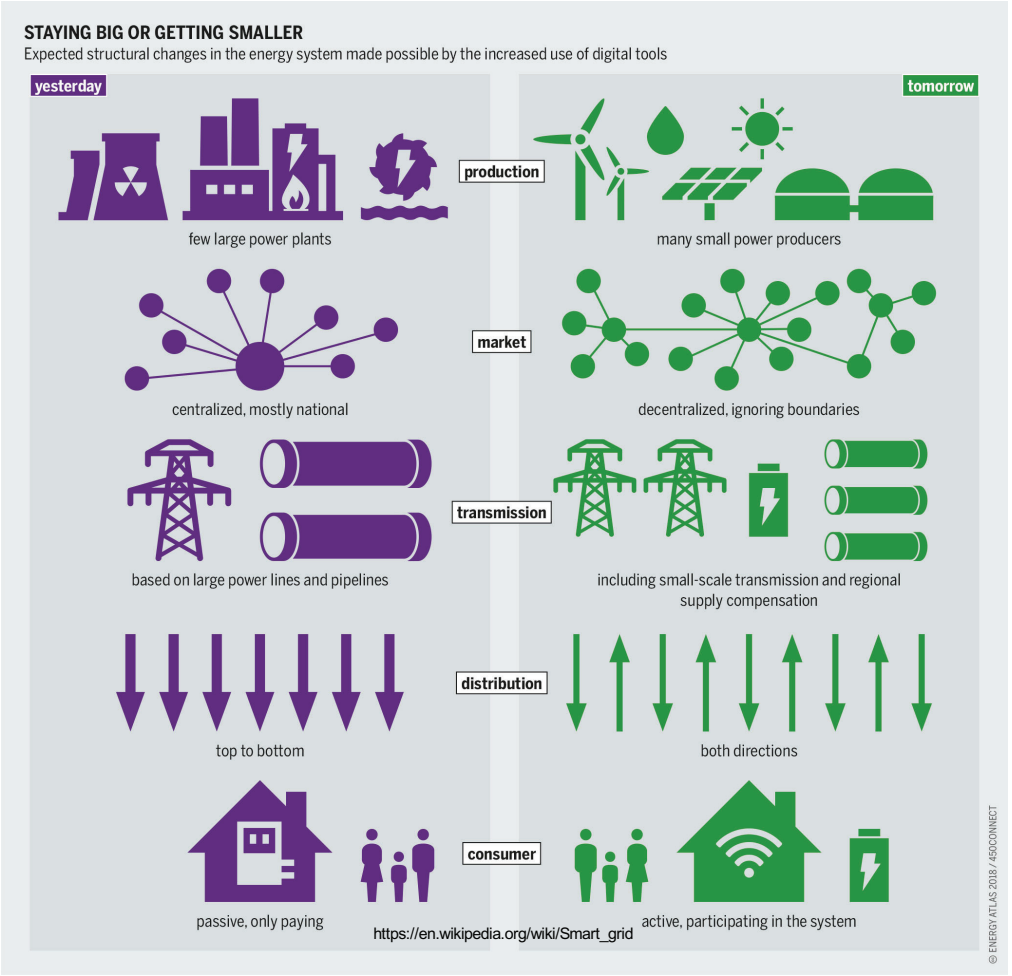


Desire to make the grid smarter, safer, reliable and more cost-effective using advanced sensors, communication technologies and distributed computing.

Difference Between a Normal Grid And a Smart Grid

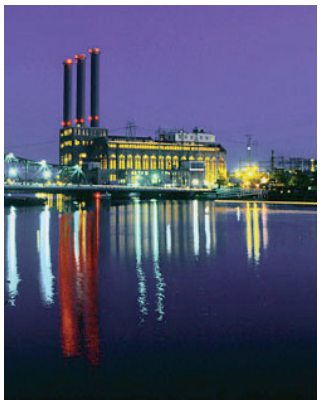
Normal Phone

Smart Phone



Starting and End Points of a Smart Grid

It starts at the Generator and ends at the Refrigerator



Power Plant

Transmission

Distribution

Home Business

End-use Appliances

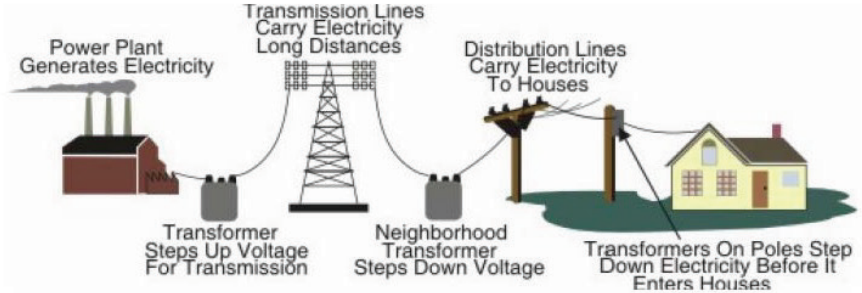
Smart Grid Building Blocks

Evolution of the Grid

Smart Grid

Before **Smart Grid:**

One-way power flow, simple interactions



After **Smart Grid:**

Two-way power flow, multi-stakeholder interactions

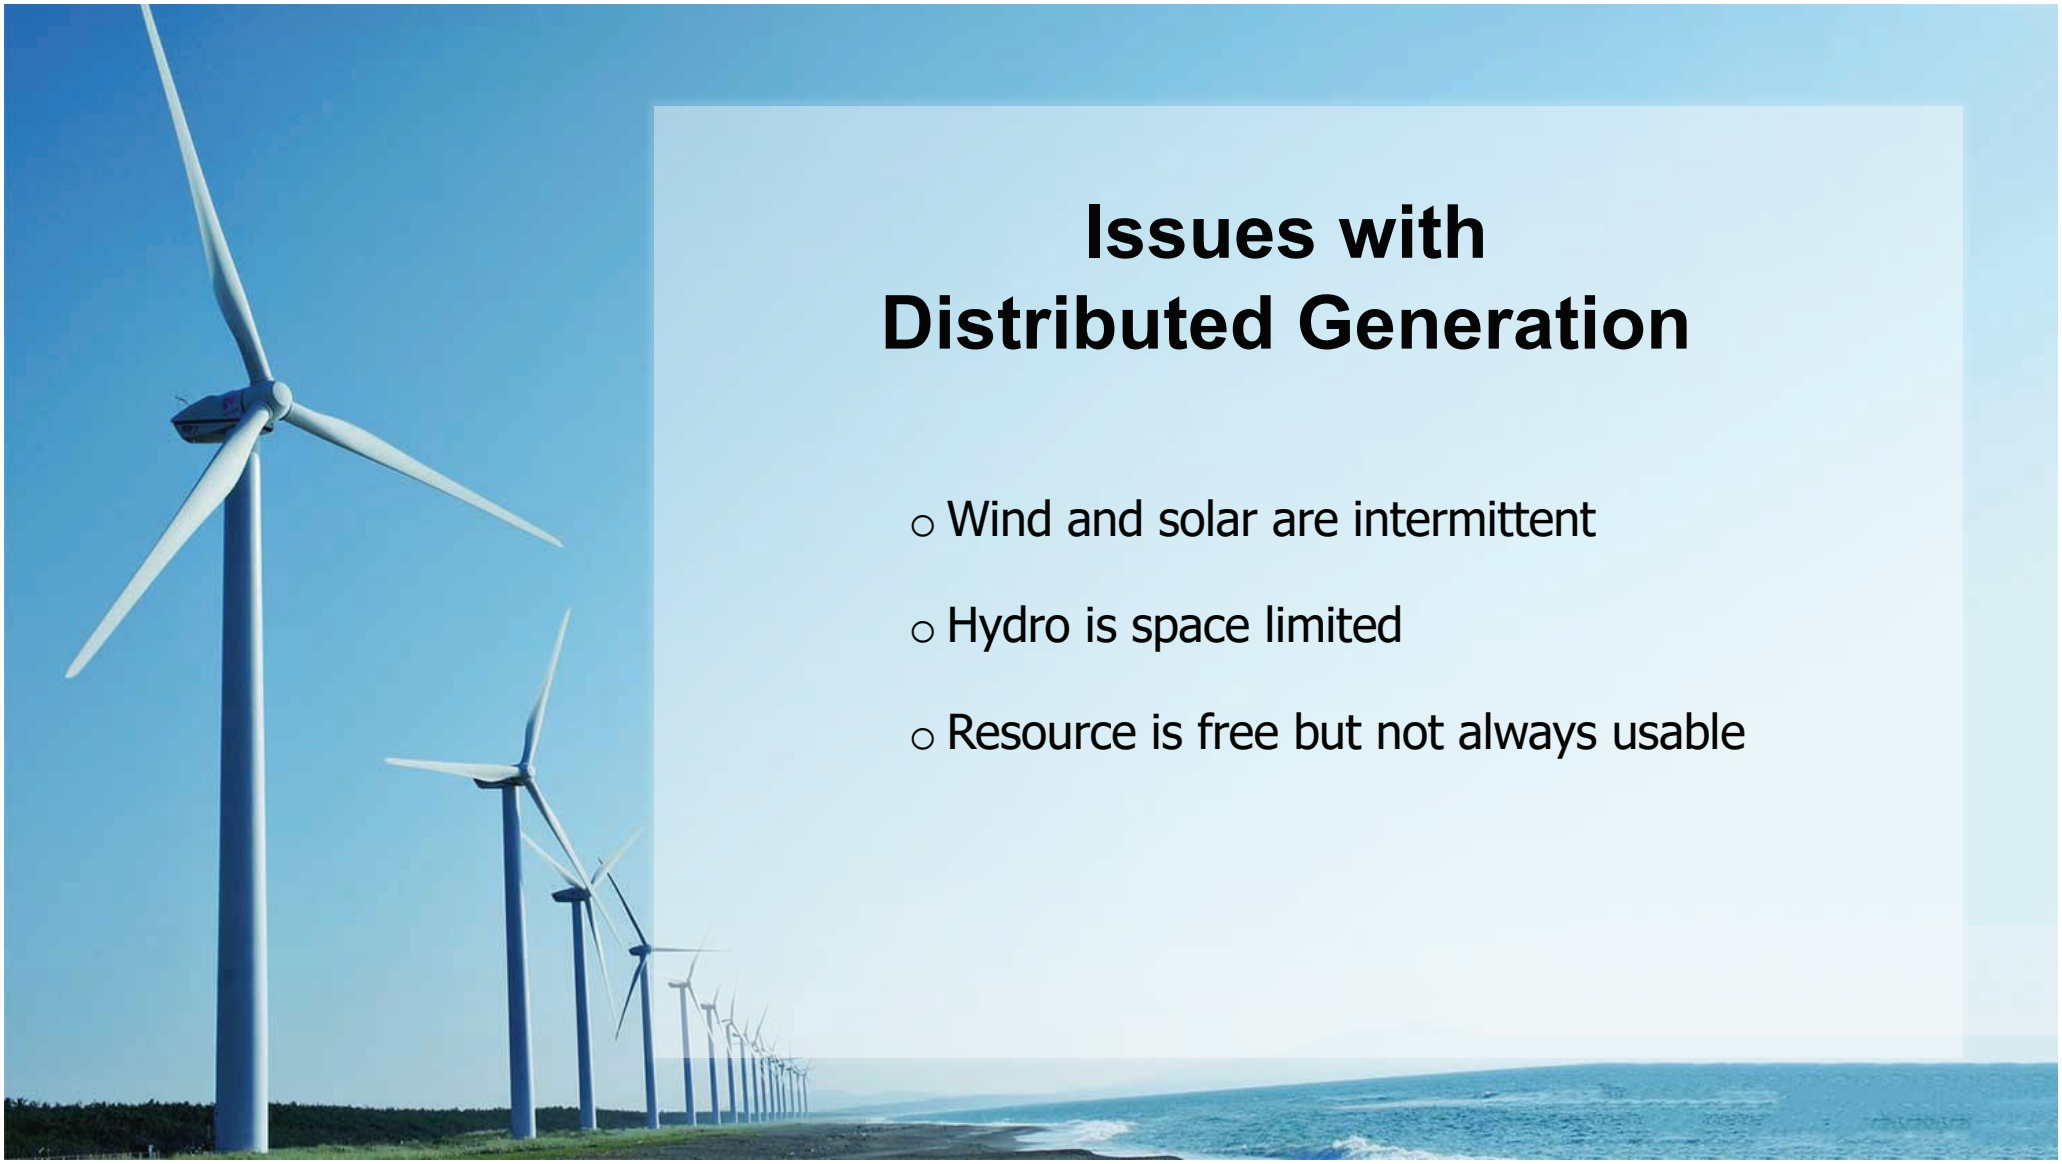
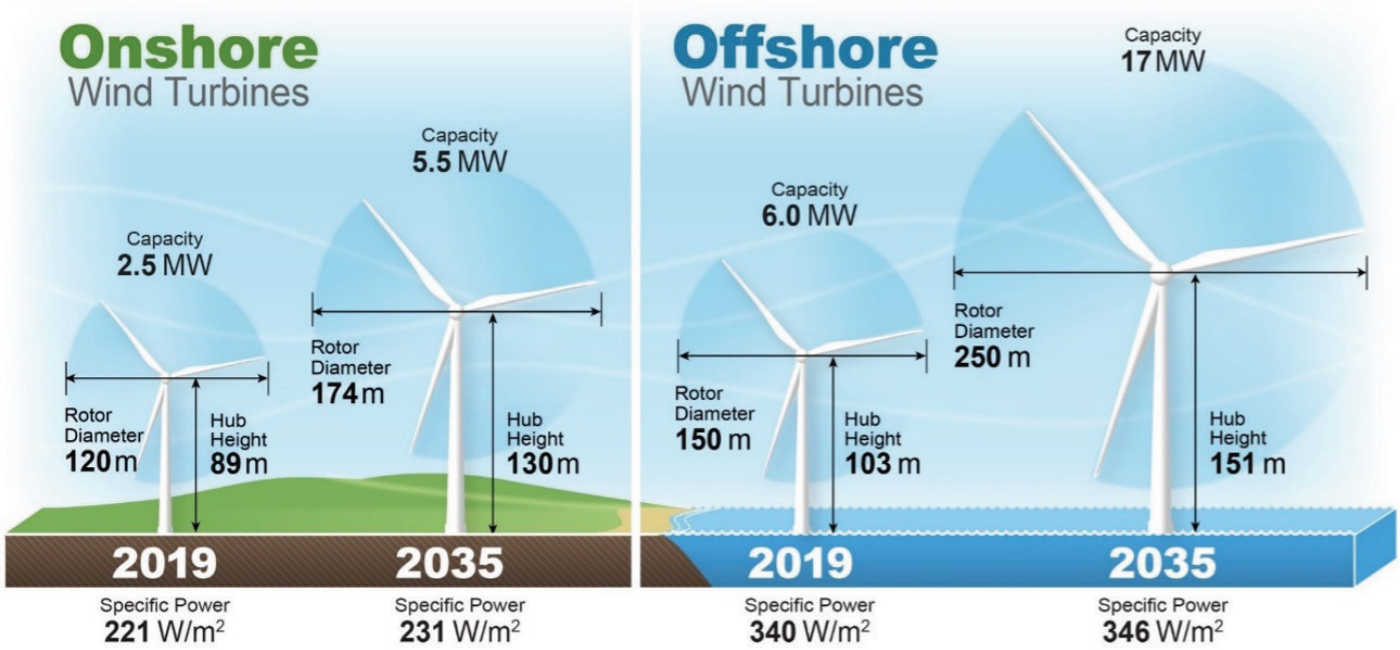
Changing Landscape for the Electric Utility



Issues with Distributed Generation

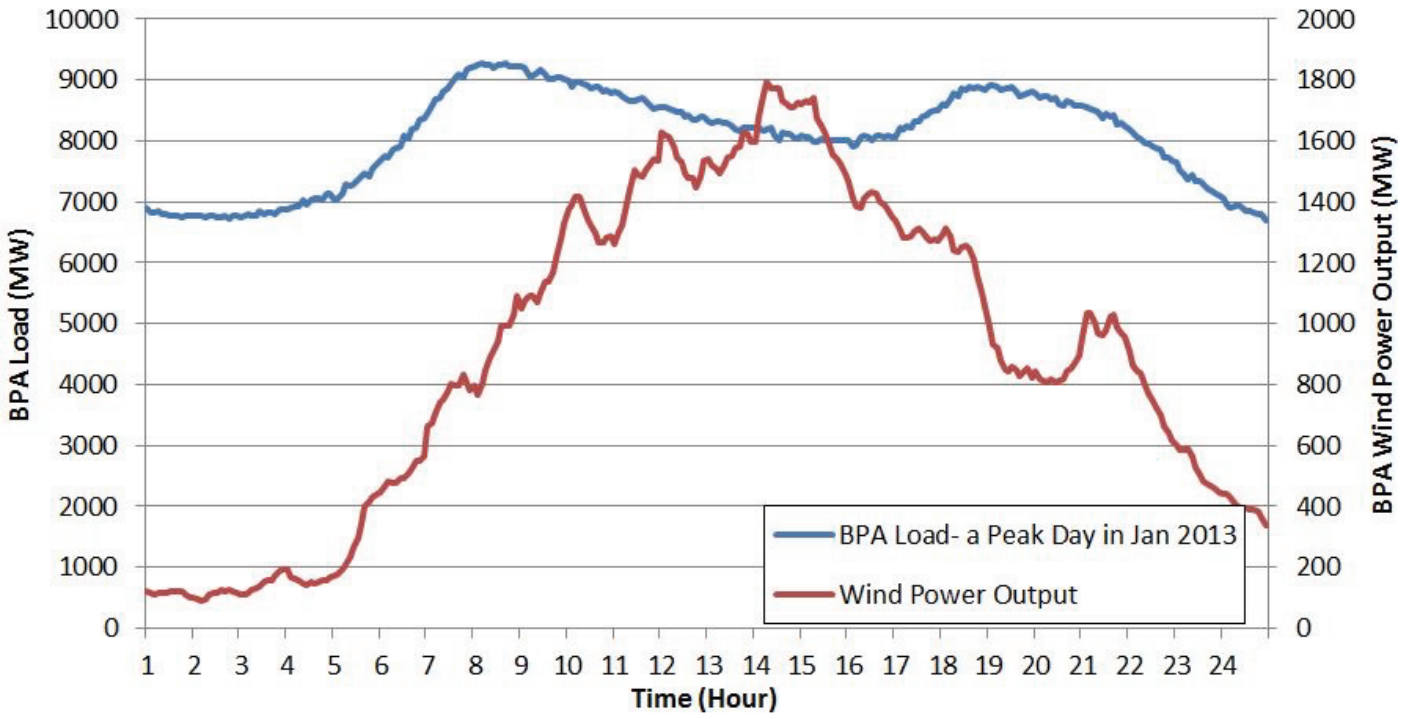
- Wind and solar are intermittent
- Hydro is space limited
- Resource is free but not always usable

Wind Energy

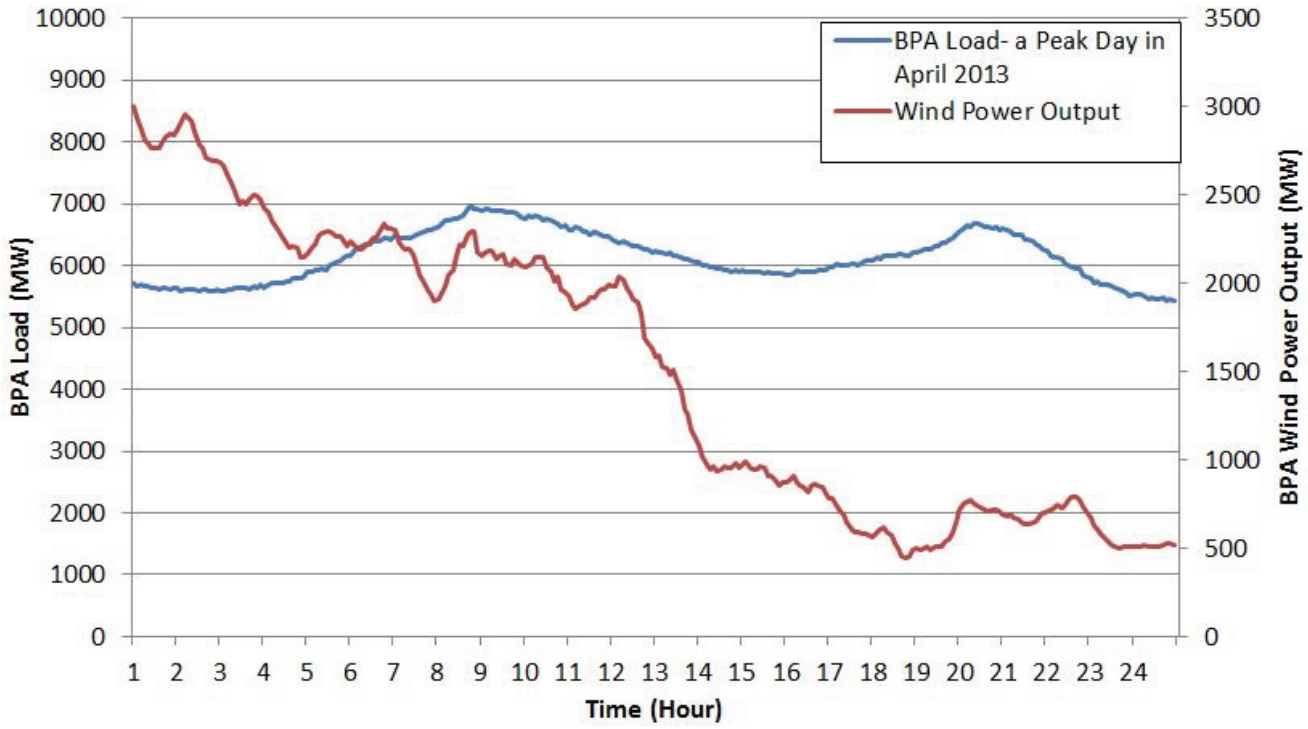


https://www.renewableenergyworld.com/wind-power/wind-power-experts-expect-wind-energy-costs-to-decline-up-to-35-by-2035/#gref

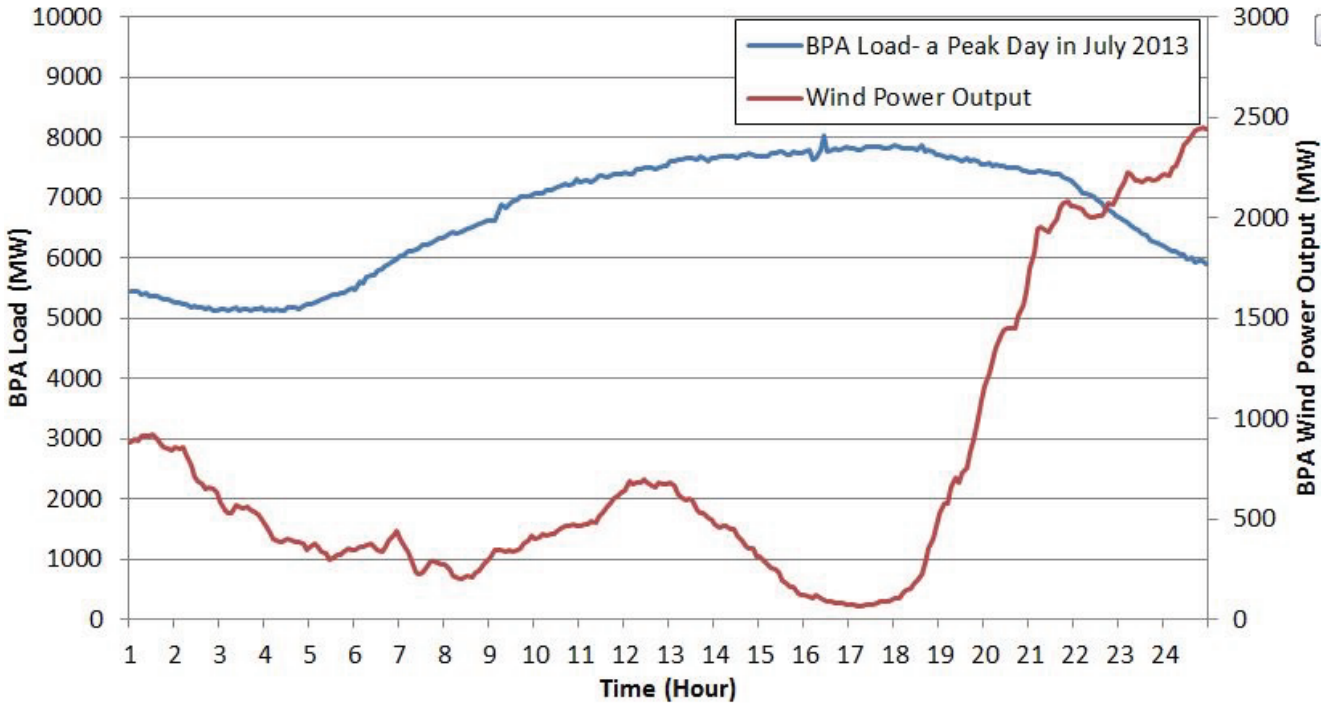
BPA Wind Output and Load Mismatch (A typical day in January)



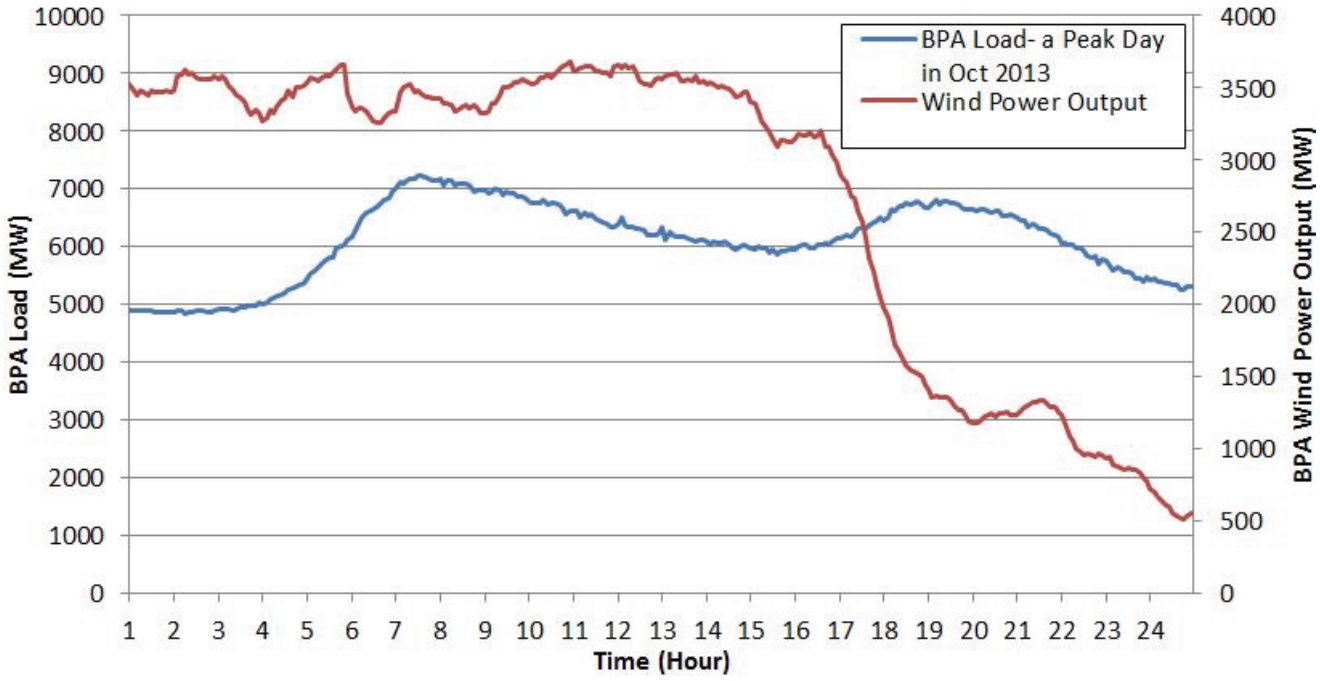
BPA Wind Output and Load Mismatch (A typical day in April)



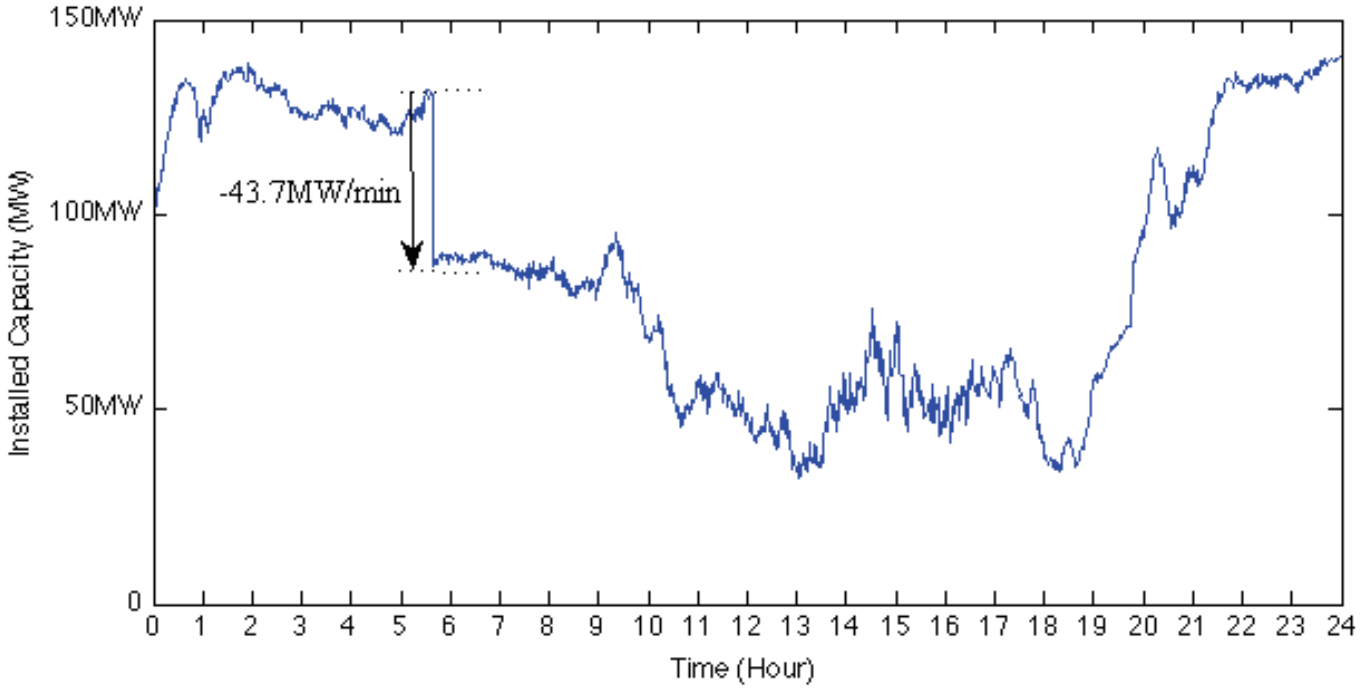
BPA Wind Output and Load Mismatch (A typical day in July)



BPA Wind Output and Load Mismatch (A typical day in October)



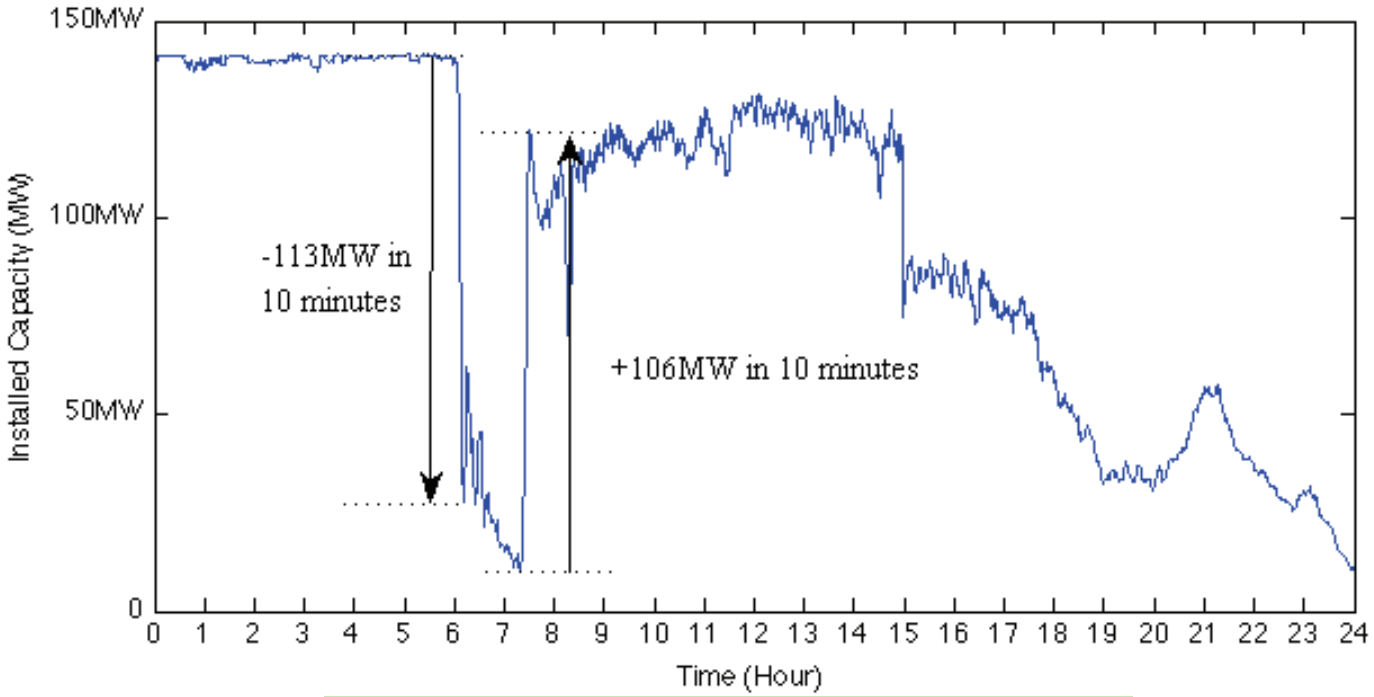
1-minute Variation of a 150MW Wind Farm Output in Texas



Wind output can drop 43.7 MW in 1 minute for a single 150-MW wind farm

Source: NREL

10-min Variation of a 150MW Wind Farm Output in Texas



Wind output can drop 113 MW in 10 minutes, and increase 106 MW in 10 minutes

Solar Energy

Roof-top Solar Photovoltaics in Virginia

Solar Panels in Winter

Intermittency Caused by Weather Events

Solar PV Project in UAE

Sand Storm in Abu Dhabi

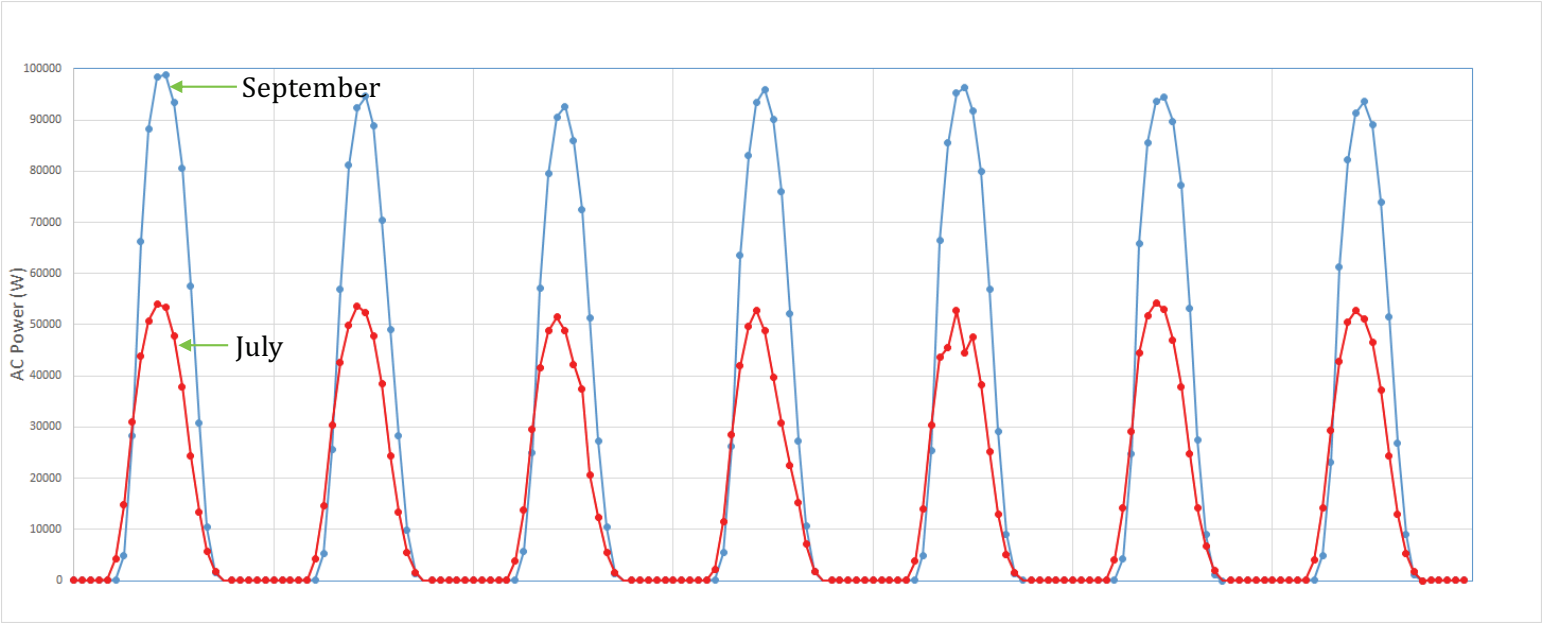
In-depth look at Solar PV in Saudi Arabia

2-MW Roof-top Solar PV plant at KAUST

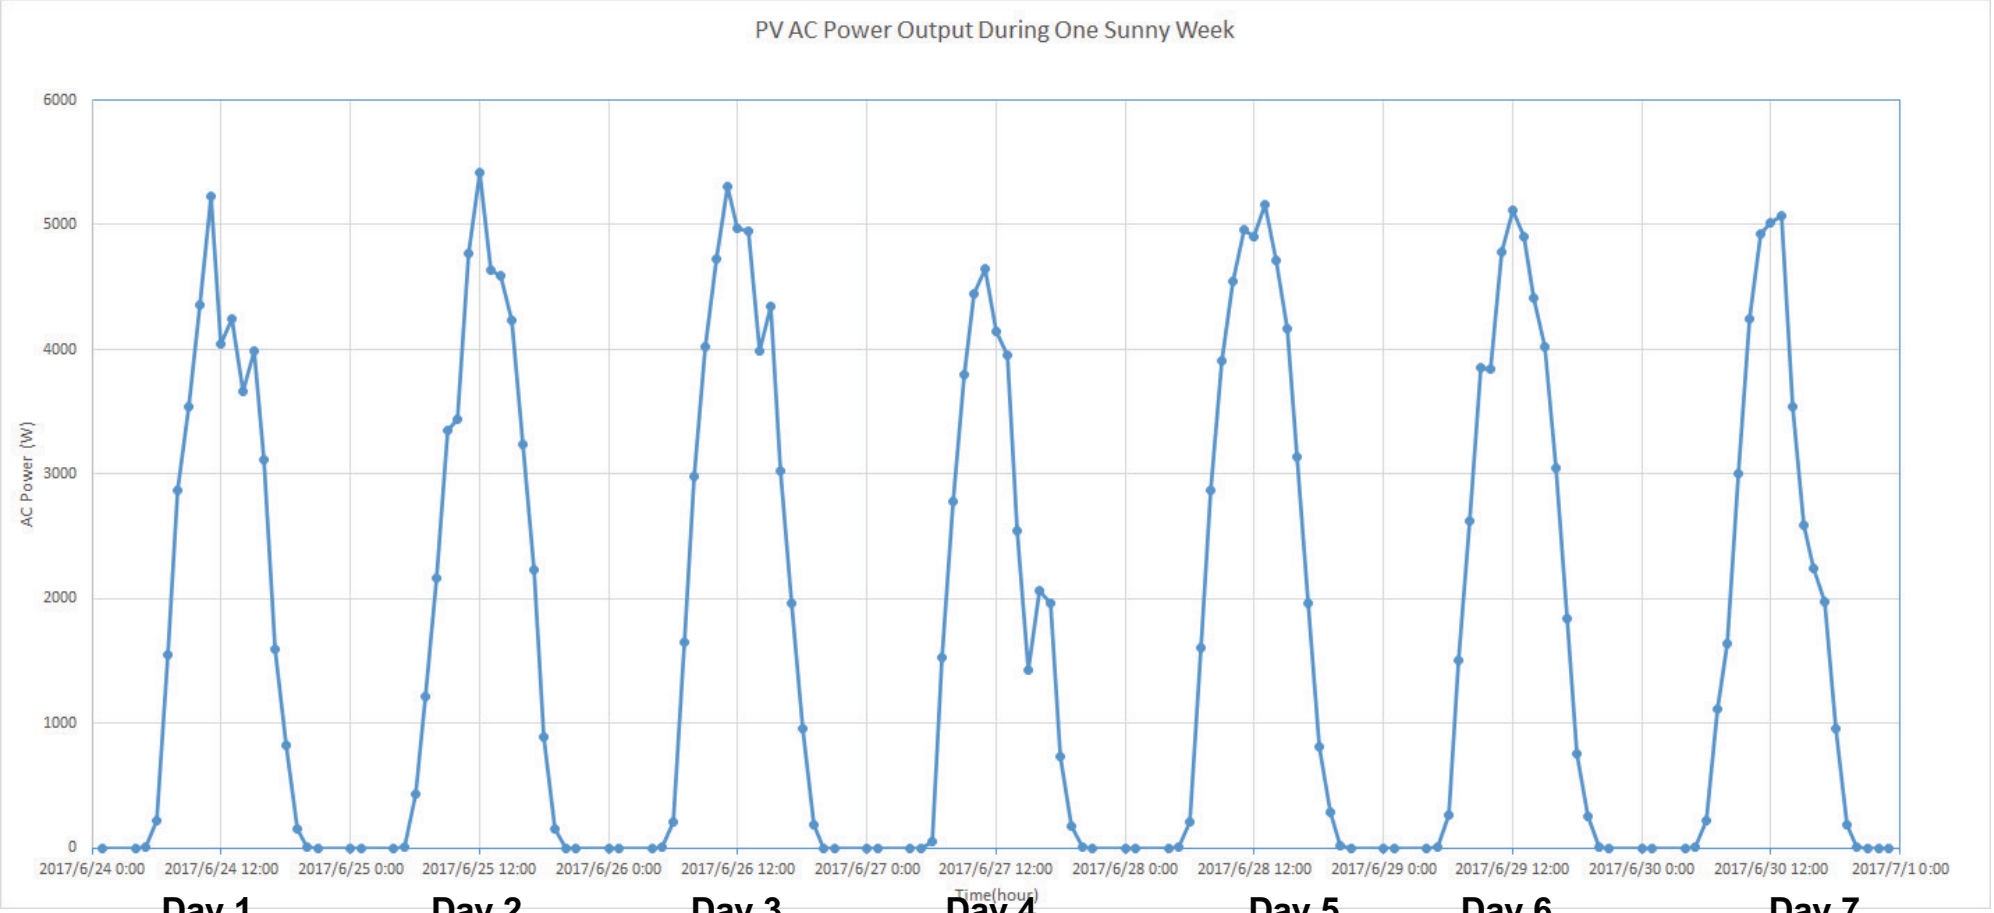
Solar PV Panels in Saudi Arabia

Reality Check

Solar PV Array (100kWp) Riyadh Area

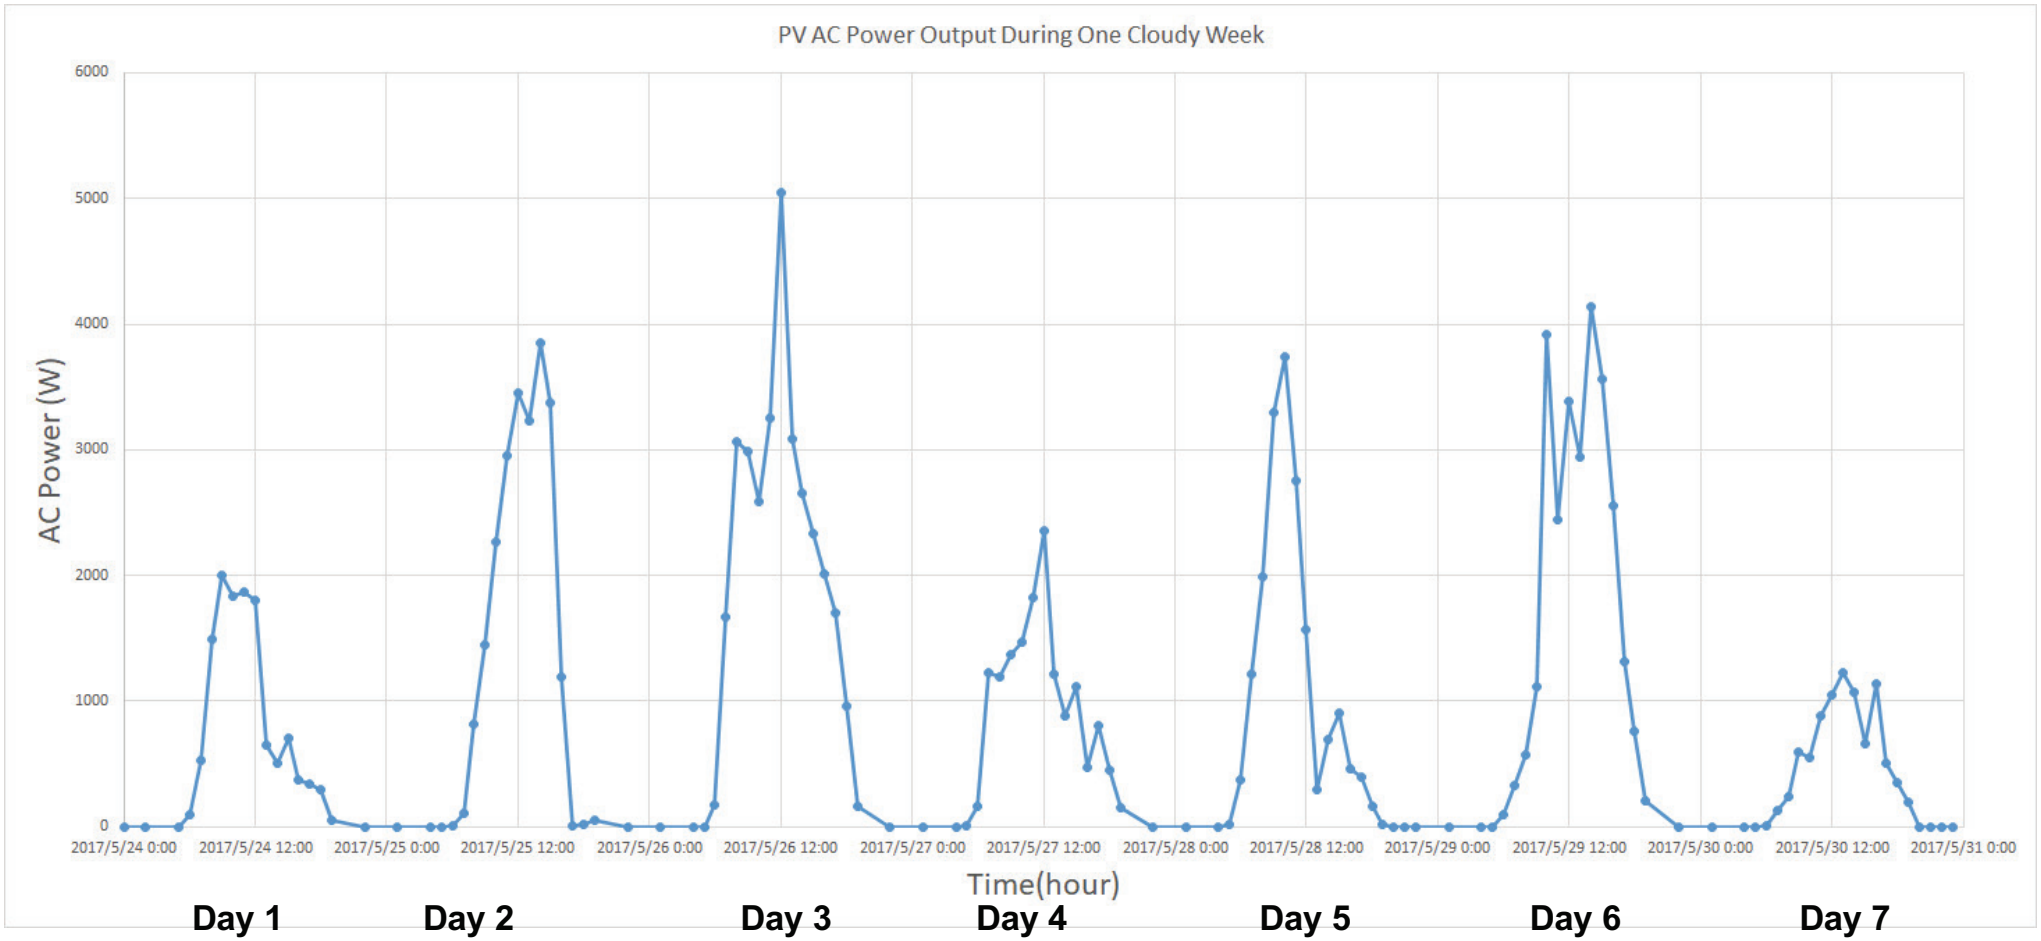


7-Day Solar PV Output (Virginia)

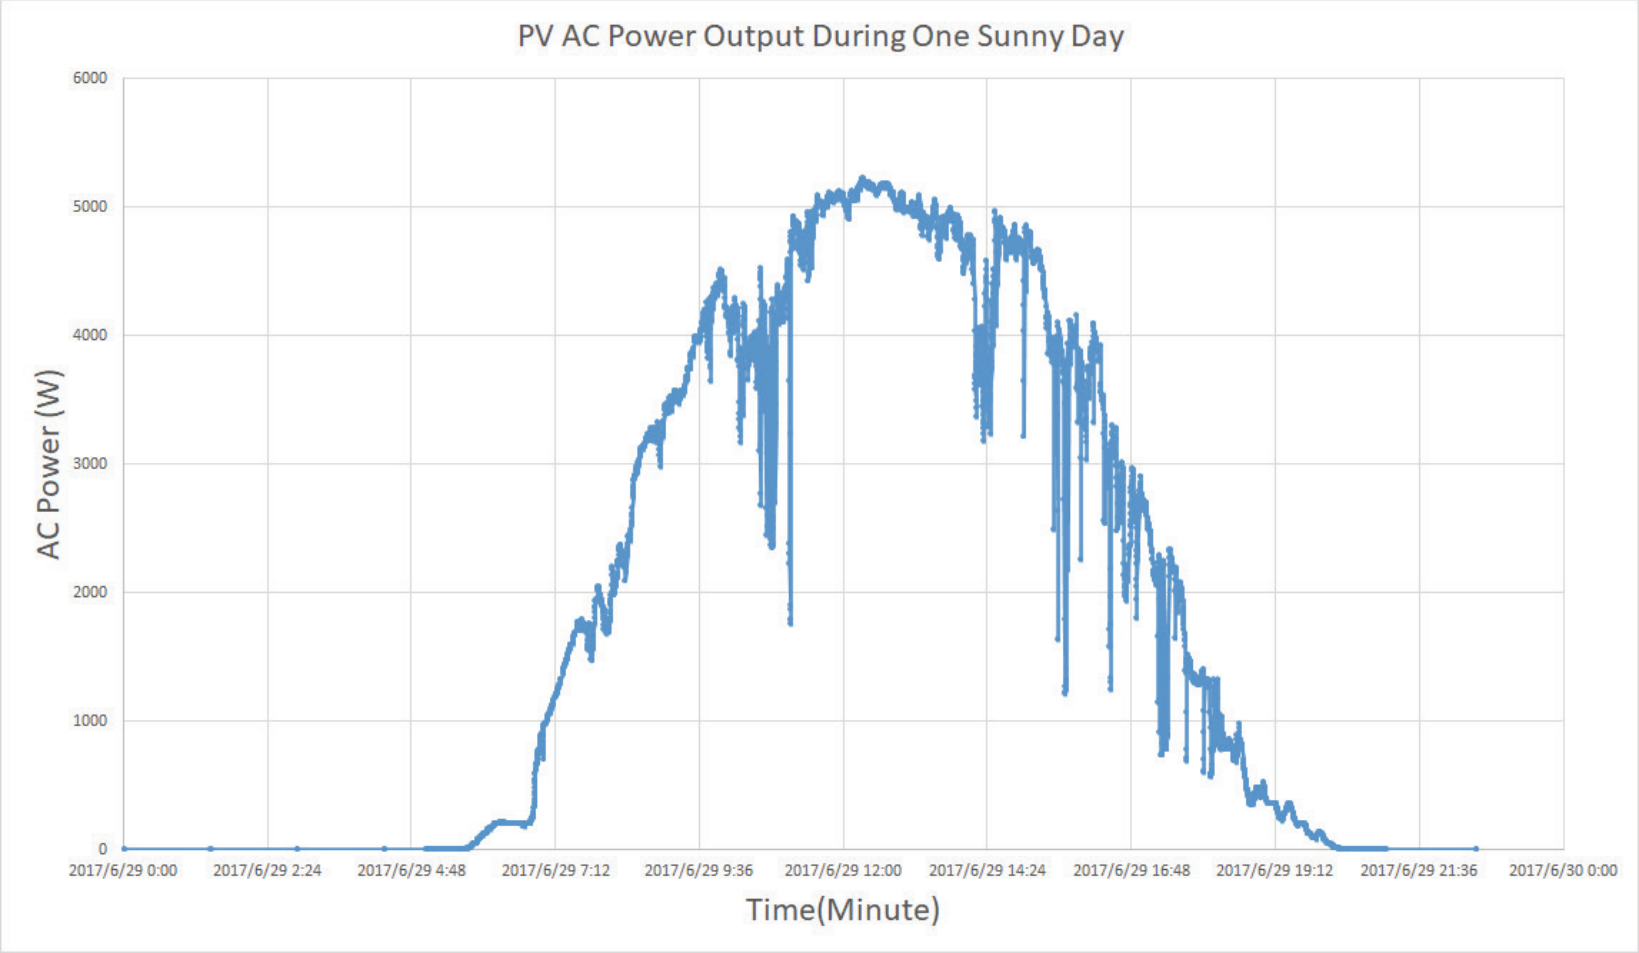


Day 1 **Day 2** **Day 3** **Day 4** **Day 5** **Day 6** **Day 7**

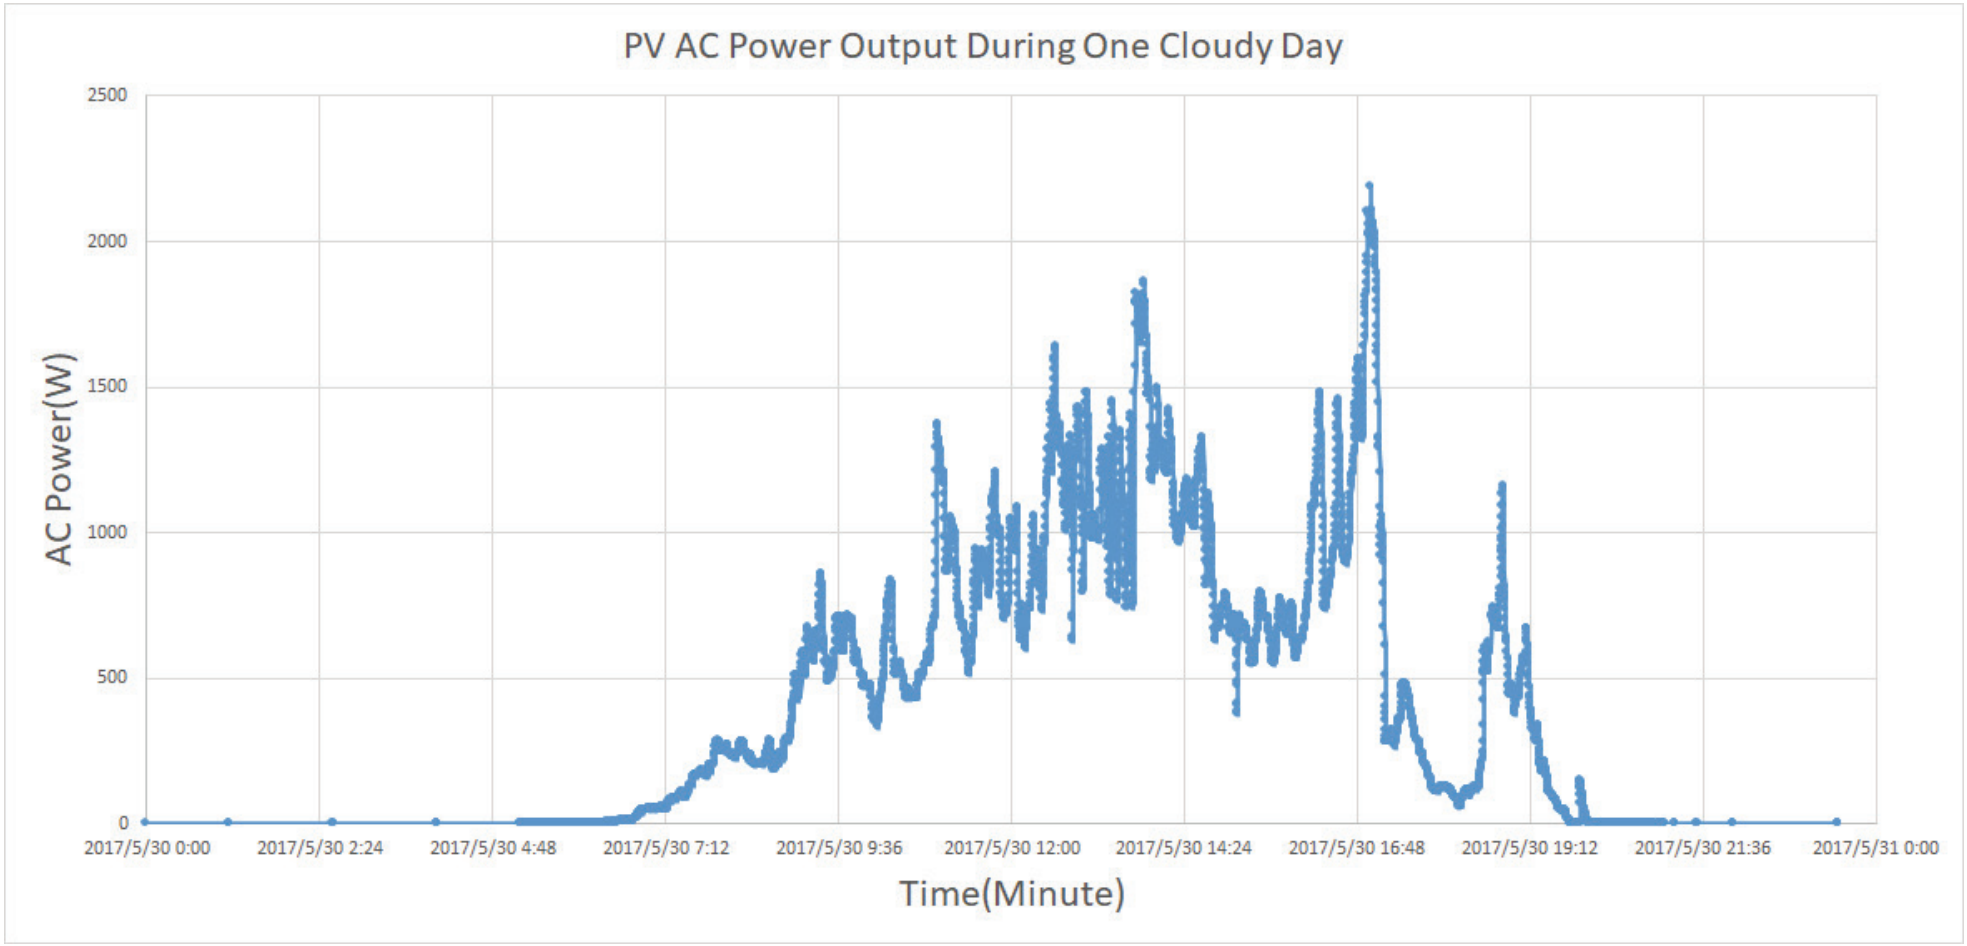
7-Day Solar PV Output (Virginia cloudy)



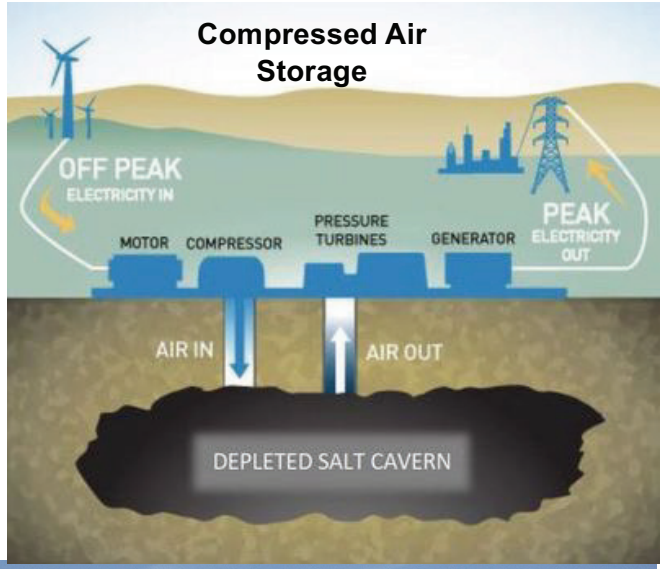
Daily PV Output (Virginia)

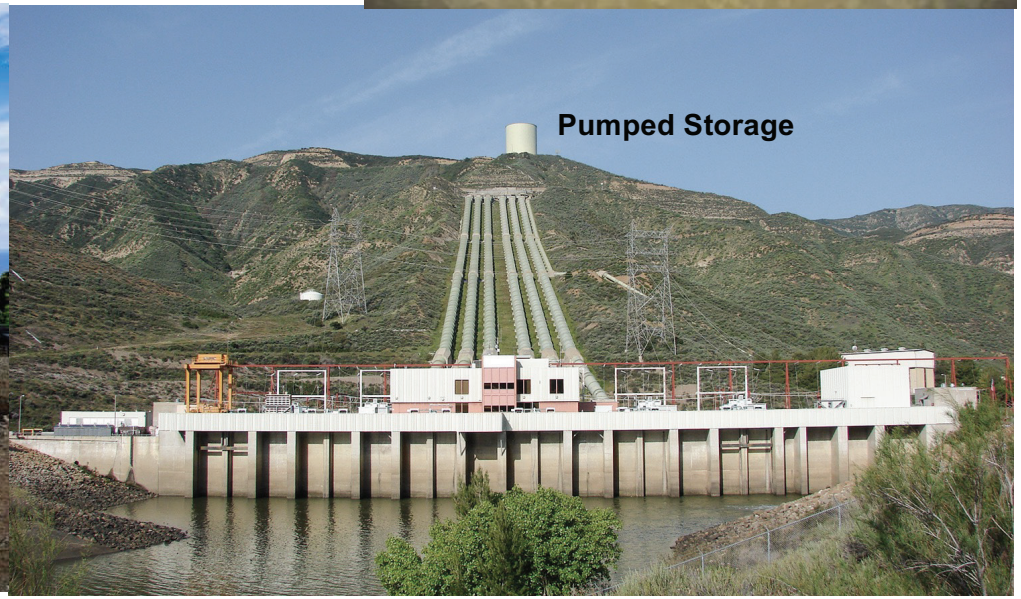


Daily PV Output (Virginia, intermittent)



Can the Intermittency be Absorbed by the Network?





New Paradigm for the Electric Power System

Historically: Demand driven supply (supply responds to demand)

New Reality: Supply driven demand (demand needs to adjust to meet fluctuating supply with help from storage)

THE SMART GRID ECOSYSTEM

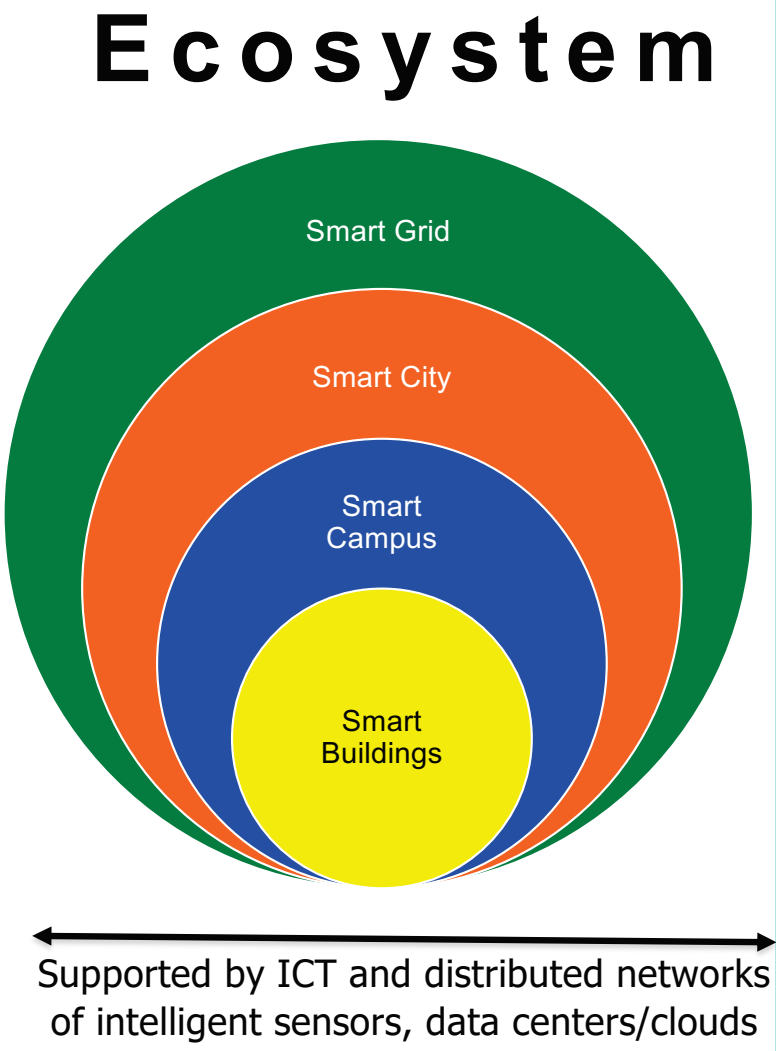
The Smart Grid Ecosystem

Smart grid: Bi-directional flows of energy, remote control/automation of power, integrated distributed energy…

Smart city: Complex system of interconnected infrastructures and services…

Smart Campus: A collection of buildings managed by the same facility manager…

Smart buildings: Intelligent building automation systems, smart devices, productive users, grid integration…



IEEE: Enabling Innovation and Technology Solutions

What Can you Do to Serve Humanity?

Clean Tech Solutions for Climate Change.

IEEE can be a solution partner
